#### **Context & Vision**

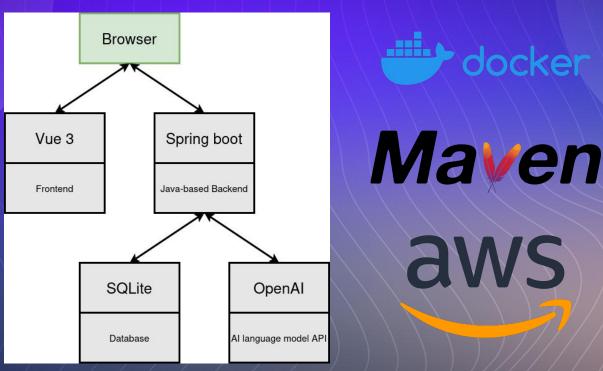

- IBM is a global leader in AI, cloud computing, and enterprise solutions.
- **IBM SkillsBuild** helps students develop tech skills but can be overwhelming to navigate.
- Our solution: developing an AI-powered chatbot to:
  - 1) Provide course recommendations based on user interests.
  - 2) Answer questions about IBM SkillsBuild.
  - 3) Offer university advice.

# **User Stories**

As a University of Bristol student, I want the chatbot to be able to give me advice if I am struggling with university life so that I am able to focus on my studies.

As a Computer Science student, I want to find good online courses with extracurricular knowledge, so that I could expand my skills and get some reputable certifications that will benefit my career.

# Tech Stack, CI/CD

### **Iterative Design 1 (MVP)**

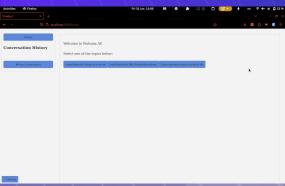

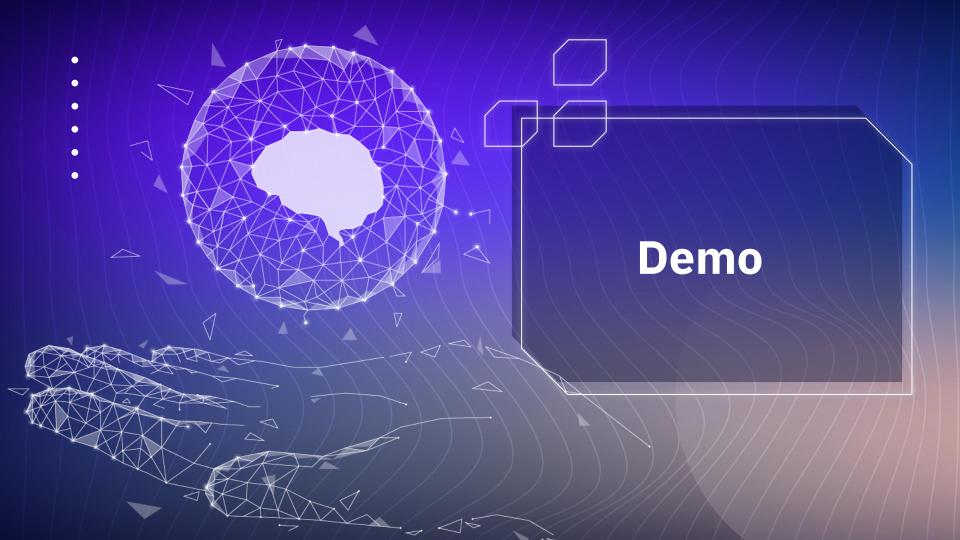

## **Iterative Design 2 (Pre-Testing Day)**

#### **Testing Day Feedback**

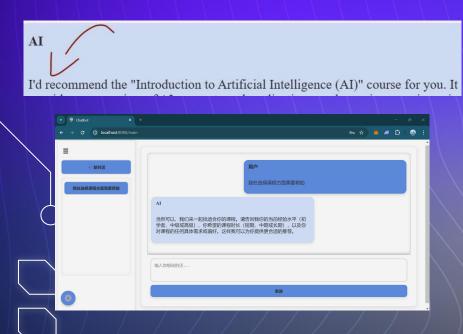

Apostrophes appear as question marks in chatbot responses.

UI felt unintuitive.

No support for multiple languages.

Duplicate responses when repeatedly pressing chat initialization buttons.

#### Testing Day Response

#### Client Feedback

"The demo was clear - the gui was equally clear, and I could see how the user would interact with the Al. The purpose looked clear - the user could see what the app could/shouldn't do and also the AI was implemented well - with a user friendly vernacular."

#### **What We've Learned**

#### **Problems:**

- 1. Group Separation
- 2. Unequal Workload
- 3. Lack of Communication

#### **Solutions:**

- Mixing Pair-Programing Groups
  - Agile Sprints

#### **Plans for Final Release**

- Code refactoring
- SQL database
- Responsive UI
- PWA
- Text-to-speech
- Image input
- Easter egg

# Questions?
